

# The gold layer gets acted on, not just queried

Activations is the fourth native Fivetran stage, right after Transformations. The instant `gold.mart_shipment_risk` flips a shipment's `risk_tier` to high — 30 hours or fewer to pickup, zero carrier tenders accepted in Oracle TMS, chargeback exposure at \$25,000 or more — Activations pushes a spot-tender request straight into Uber Freight, no reverse-ETL vendor, no second copy of the data, no coordinator in the loop.

|                                                                                    |                                                                                   |                                                                                          |

| WHAT YOU SAY                                                                                                                                                                                                                                                                                                                                                                     | WHAT YOU SHOW                                                                                                    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
| "Shipment 22841, MegaMart Stores, twenty-eight hours to pickup, and Oracle TMS is showing zero accepted carrier tenders on the Joliet to Bentonville lane. That's forty-eight thousand dollars of chargeback exposure sitting in a queue until a logistics coordinator happens to scan it."                                                                                      | <b>Toggle <code>gold.mart_shipment_risk</code> so SHP-22841 flips to high risk live on screen.</b>               |
| "Watch what Activations does instead. The instant <code>gold.mart_shipment_risk</code> flips this shipment to high risk with zero tenders accepted, Fivetran pushes the load ID, pickup and drop-off facilities, deadline, and a bid ceiling straight into Uber Freight's carrier marketplace — no analyst, no manual re-tender, no waiting for the morning logistics stand-up." | <b>Architecture page → Activations panel → /activations-live: Segment Definition → Field Mapping → API Push.</b> |
| "A backup carrier picks up this load in under four minutes."                                                                                                                                                                                                                                                                                                                     | <b>/activations-live → Destination Confirmation table, SHP-22841 row showing carrier acceptance.</b>             |
| "Multiply that by the three hundred eighteen at-risk shipments the compliance agent is already tracking at MegaMart, and you're cutting straight into the four-point-two-million-dollar Q3 exposure — before any of it reaches a chargeback invoice."                                                                                                                            | <b>Architecture page → Activations panel → Trigger / Destination / Outcome tiles.</b>                            |

Trigger condition: `hours_to_pickup ≤ 30 AND accepted_tender_count = 0 AND chargeback_exposure_usd ≥ $25,000`, computed in `gold.mart_shipment_risk`. Field mappings: `shipment_id` → `uber_freight_load_reference`, `origin_dc_id` → `pickup_facility_id`, `retailer_dc_destination` → `dropoff_facility_id`, `otif_pickup_deadline_ts` → `requested_pickup_by`, `chargeback_exposure_usd` → `bid_ceiling_usd`. Synthetic data — for ODI architecture demonstration only.
